Patent Rights

This product is patented. See the product for more information.

US Export Control Compliance

IPG is committed to complying with U.S. and foreign export, import and customs requirements. Export and re-export of lasers and other products manufactured by IPG are subject to U.S. and foreign laws and regulations, including the US Export Administration Regulations administered by the Department of Commerce, Bureau of Industry and Security. The applicable restrictions vary depending on the specific product involved, intended application, the product destination and the intended user. In some cases, an individual validated export license is required from the US Department of Commerce prior to resale or re-export of certain products.

You are ultimately responsible for exporting any IPG product in accordance with the Export Administration Regulations and the U.S. Customs and Border Protection Regulations. IPG recommends that you obtain your own legal advice when attempting to export. All export and custom classifications and information provided by IPG is subject to change without notice. IPG makes no representation as to the accuracy or reliability of the classification information provided. The stated classification only applies to equipment as it left the IPG factory. Any modifications or changes after leaving the IPG facility will be your responsibility to obtain further classifications. IPG is in no way responsible for any damages whether direct, consequential, incidental, or otherwise, suffered by you as a result of using or relying upon such classifications, groups, or symbols for any purpose whatsoever.

Information relating to U.S. export rules and regulations can be found at the U.S. Bureau of Industry and Security Website. Information related to U.S. Customs and Border Protection can be found at the U.S. Customs Website.

PREFACE

Ensure you read and understand this User Guide in its entirety and familiarize yourself with the operating and maintenance instructions before you use the product. IPG strongly recommends that all operators of the product read and pay particular attention to all safety information contained herein prior to operating the product.

This User Guide should stay with the product to provide you and all future operators, users, and owners of the product with important operating, safety, and other information.

Audience

The audience for this User Guide is system integrators and technicians responsible for installing and operating the product in industrial and non-industrial installations.

Technical Support

Most issues and questions regarding the safety, setup, operation, and maintenance of IPG products can be resolved by carefully reading this User Guide. If you have questions regarding the safety, setup, operation or maintenance of your IPG product, please call our Customer Service department at 508-373-1157.

Language

The original instructions is in English.

TCP API Commands

This section describes the TCP API commands for controlling IPGScan externally. The commands are ASCII based strings that are sent through a TCP/IP connection to IPGScan, so the software can respond accordingly.

All commands should be followed by a carriage return (ASCII #13) and a line feed (ASCII #10). For example: JobOpen MyJob<CR><LF>.

Prior to sending any commands a connection between the computer running IPGScan and the device trying to control it, must exist. In this case, IPGScan will behave as a Server while the external device will be the Client requesting a connection to IPGScan.

To define the IP Address and Port Number in which the IPGScan server engine will be listening to incoming connections follow the steps below:

1. Open IPGScan
2. Click on View -> Options
3. On the three to the left, click on Settings

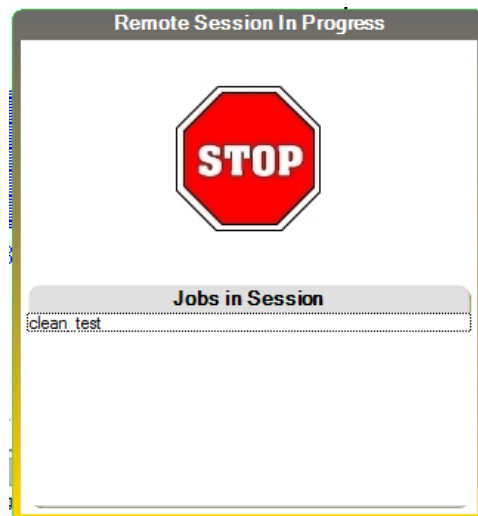

4. Scroll down to TCP/IP

TCP/IP	
Actions Port	89
Command Port	88
Encoding	UTF8
IP Address	0.0.0.0

5. Select the Encoding type for the ASCII characters
6. Select the IP Address (if more than one interface is installed in the computer) and Command Port number for the Server engine.
7. Restart IPGScan

NOTE | When a job is run using TCP commands, a message will appear in IPGScan showing remote session is in progress:

JobOpen

<p>Parameters: <i>Filename</i></p> <p>Returns: “<i>Filename</i> opened”</p> <p>Description: Opens a job file in the IPGScan Jobs folder. Filename should not have the “wjb” extension.</p>	<p>Error: “<i>Error: Filename</i> not found”</p> <p>Troubleshooting: Job doesn’t exist or can’t be opened. Check that spelling and case is correct. Weird symbols in job names may also cause this error.</p> <p>Example: JobOpen MyJob<CR><LF></p>
---	--

JobStart

<p>Parameters: <i>Filename</i></p> <p>Returns: “<i>Filename</i> started...”</p> <p>Description: Starts welding <i>Filename</i> job. If no job is specified, an error occurs. Filename should not have the “wjb” extension.</p>	<p>Error: “<i>Error: ScanController</i> not connected” , “<i>Error: Weld</i> in progress” or “<i>Error: Filename</i> not opened”</p> <p>Troubleshooting: Check that a scanner is connected by using the ScannerGetStatus command. If another weld is in progress you must halt that weld before starting another. Check if the correct <i>Filename</i> is specified.</p> <p>Example: JobStart MyJob<CR><LF></p>
---	--

JobStop / JobAbort

<p>Parameters: <i>Filename</i></p> <p>Returns: “<i>Filename</i> Stopped” or “<i>Filename</i> Aborted”</p> <p>Description: Abort will terminate the job immediately. Stop will wait until the current job is complete before stop</p>	<p>Error: “<i>Error: No running Job</i> found”</p> <p>Troubleshooting: No job is currently running.</p> <p>Example: JobStop MyJob<CR><LF>, JobAbort MyJob<CR><LF></p>
---	--

JobClose

<p>Parameters: <i>Filename</i></p> <p>Returns: “<i>Filename</i> closed”</p> <p>Description: Closes current job. The remote session dialog will be closed</p>	<p>Error: “<i>Error: Filename</i> not closed”</p> <p>Troubleshooting: Check if the job is running by using JobGetStatus command. No job can be running for IPGScan to close.</p> <p>Example: JobClose MyJob<CR><LF></p>
---	--

JobList

<p>Parameters: none</p> <p>Returns: List of filenames inside IPGScan’s Jobs folder. Carriage return (n) is appended at the end of every job in the list.</p> <p>Description: List all available jobs in IPGScan’s Jobs folder.</p>	<p>Error: “<i>Error: IPGScan</i> directory not found”</p> <p>Troubleshooting: “C:\IPGScan\Jobs” folder cannot be found. Check that this folder exists on the file system.</p> <p>Example: JobList<CR><LF></p>
---	--

ConnectionGetStatus

<p>Parameters: none</p> <p>Returns: Returns Computer Name in which IPGScan is running.</p> <p>Description: Check if you are correctly connected to IPGScan.</p>	<p>Error: “<i>Error: No TCP</i> Connection”</p> <p>Troubleshooting: Check IP Address and Port numbers.</p> <p>Example: ConnectionGetStatus<CR><LF></p>
--	---

ScannerGetStatus

<p>Parameters: none</p> <p>Returns: Name of the scanner that IPGScan is currently connected.</p> <p>Description: Used to inform if IPGScan is connected to a specific scanner</p>	<p>Error: “ ”</p> <p>Troubleshooting: If an empty string was returned, no scanner is connected.</p> <p>Example: ScannerGetStatus<CR><LF></p>
--	---

JobGetStatus

<p>Parameters: none</p> <p>Returns: Status of IPGScan (Idle or Busy).</p> <p>Description: Returns the status of IPGScan. Returns busy if job is running.</p>	<p>Error: none</p> <p>Troubleshooting: none</p> <p>Example: JobGetStatus<CR><LF></p>
---	---

GetEncoding

<p>Parameters: none</p> <p>Returns:Text Encoding Scheme - UTF8</p> <p>Description: Returns text encoding scheme set in Options.</p>	<p>Error: none</p> <p>Troubleshooting: none</p> <p>Example: GetEncoding<CR><LF></p>
--	--

ScannerGetStartBit

<p>Parameters: none</p> <p>Returns:Start Bit – True/False.</p> <p>Description: Returns Boolean value of Start Bit.</p>	<p>Error: Error: ScanController not connected.</p> <p>Troubleshooting: none</p> <p>Example: ScannerGetStartBit<CR><LF></p>
---	---

ScannerGetEnableBit

<p>Parameters: none</p> <p>Returns: Enable Bit – True/False.</p> <p>Description: Returns Boolean value of Enable Bit.</p>	<p>Error: Error: ScanController not connected.</p> <p>Troubleshooting: none</p> <p>Example: ScannerGetEnableBit <CR><LF></p>
--	---

ScannerGetPortA

<p>Parameters: none</p> <p>Returns: Port A value - 0x01FF0FFF.</p> <p>Description: Returns hex value of Port A.</p>	<p>Error: Error: ScanController not connected.</p> <p>Troubleshooting: none</p> <p>Example: ScannerGetPortA<CR><LF></p>
--	--

ScannerGetStatus

<p>Parameters: none</p> <p>Returns: Connected scanner’s name.</p> <p>Description: Returns the name of currently connected scanner.</p>	<p>Error: Error: Not Connected</p> <p>Troubleshooting: none</p> <p>Example: ScannerGetStatus<CR><LF></p>
---	---

JobGetStatus

<p>Parameters: none</p> <p>Returns: Job running status – Idle/Busy.</p> <p>Description: Returns job running status.</p>	<p>Error: none</p> <p>Troubleshooting: none</p> <p>Example: JobGetStatus<CR><LF></p>
--	---

ScannerLock

Parameters: <i>scannerName</i>	Error: various errors can be returned here
Returns: <i>scannerName</i> is locked.	Troubleshooting: none
Description: Locks scanner.	Example: ScannerLock <i>scannerName</i> <CR><LF>

ScannerUnlock

Parameters: <i>scannerName</i>	Error: various errors can be returned here
Returns: <i>scannerName</i> is unlocked.	Troubleshooting: none
Description: Unlocks scanner.	Example: ScannerUnlock <i>scannerName</i> <CR><LF>

ScannerInit

Parameters: none	Error: various errors can be returned here
Returns: Currently locked scanner is initialized.	Troubleshooting: none
Description: Initializes currently locked scanner.	Example: ScannerInit<CR><LF>

ScannerParkAt

Parameters: Galvo position to set to.	Error: none
Returns: ParkAt done.	Troubleshooting: none
Description: Parks galvos at specified position.	Example: ScannerParkAt 5 5 5<CR><LF>

ScannerGetWorkspacePosition

Parameters: none	Error: none
Returns: Galvo Position: 5 5 5 .	Troubleshooting: none
Description: Returns current galvo position.	Example: ScannerGetWorkspacePosition <CR><LF>

ScannerGetList

Parameters: none	Error: none
Returns: <i>scannerName1</i> <i>scannerName2</i> ... End Of Scanner List	Troubleshooting: none
Description: Returns the list of scanners currently on network.	Example: ScannerGetList<CR><LF>

ScannerGetConnectionStatus

Parameters: <i>scannerName</i>	Error: none
Returns: Scanner ' <i>scannerName</i> ' is Busy	Troubleshooting: none
Description: Returns connection status of a scanner.	Example: ScannerGetConnectionStatus <i>scannerName</i> <CR><LF>

SystemSetVariable

Parameters: <i>variableNumber</i> value	Error: none
Returns: SystemSetVariable Done.	Troubleshooting: none
Description: Sets register variable.	Example: SystemSetVariable 1 IPG<CR><LF>

SystemGetVariable

Parameters: <i>variableNumber</i>	Error: none
Returns: SystemGetVariable 'Variable 1' value is 'ipg'	Troubleshooting: none
Description: Gets register variable.	Example: SystemGetVariable 1<CR><LF>

JobGetStatus2

Parameters: none	Error: none
Returns: JobGetStatus2 Group: ' <i>groupName</i> ', Object Name: ' <i>objectName</i> '	Troubleshooting: none
Description: Returns currently executing group and object name.	Example: JobGetStatus2<CR><LF>

JobLastRunSuccessful

Parameters: none	Error: none
Returns: True/False	Troubleshooting: none
Description: Returns the status of last job run.	Example: JobLastRunSuccessful<CR><LF>

Help

Parameters: none	Error: none
Returns: List of commands	Troubleshooting: none
Description: Returns list of commands.	Example: Help<CR><LF>

Help

Parameters: <i>command</i>	Error: none
Returns: command help	Troubleshooting: none
Description: Returns help string for specified command	Example: Help <i>command</i> <CR><LF>
